

LAND AND WATER MEGA VIEW PERISCOPE

A VIEW TO A THRILL!

This full-view PERISCOPE allows stealth viewing over boulders, high bushes, backyard fences, and around corners. Three rugged, light-weight sections telescope for a reach up to 4 feet high to let you see all those out-of-reach views. EXCLUSIVE WATER FEATURE! Flip the MEGA VIEW PERISCOPE upside down and submerge for underwater viewing—on docks, poolside, lakes or beaches. A fish eye view...but without all that water in your ears.

Instructions:

If the PERISCOPE is in the closed position press on the top portion of the front latch while simultaneously pulling open the periscope. Pull the PERISCOPE open until each segment locks into its extended position and stays open. Hold and balance upward with both hands for stability and look into the viewer. For lower height viewing, each segment can collapse independent of the others. You can customize the height! To view fish and plants underwater flip the PERISCOPE upside down and insert viewing end down into the water. **DO NOT SUBMERGE PERISCOPE BEYOND THE FIRST YELLOW SECTION.** Only the smallest size yellow tube with viewer is water resistant. To collapse, compress all segments together until front latch closes and locks top viewer to large diameter tube. Always use only the top handle for carrying or hanging. Do not hang or pull on the two side handles.

⚠ CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

⚠ CAUTION: You **MUST** have adult supervision when using the water feature.
