

## Underground Habitat Instructions

Have you ever wondered what it would look like if you could cut a tree in half and see just what lives in there? Or watch insects that make their homes deep in the ground? Well, now you can with your new Underground habitat. You won't need a shovel or a saw all you have to do is watch your bugs in action for yourself. You will soon see just how amazing these creatures are!

### CONTAINS

1 Underground Habitat with lid.

### USING THE UNDERGROUND HABITAT

Use your Turbo or Super Bug Vacuum to capture a few insects/bugs. Then remove the closed off capture core from your Bug Vacuum and plug it into the opening on the Underground Habitat after you have removed the lid. Once the capture core is in place, turn the trapdoor all the way open until the insects are safely inside their new home. **REMEMBER TO ALWAYS REPLACE THE LID ON THE HABITAT.** If you don't, all your hard work will be for nothing! Now, if you look closely at your new Underground Habitat you will see that it has layers. Once you release your insects into the Habitat watch them crawl up and down and all through the caves. It's fun to see them navigate the levels and hiding places. To bring your insects up to the top, open the lid and place a small amount of food there. You will soon learn just how smart your new insects can be. Don't forget to take some time to learn what your insect/bugs like to eat. And most importantly, remember you are their only source of food and water. Make sure to keep plenty of water in the water pond at the top of the tree and always check to see that your insects have food available.

### CARING FOR THE UNDERGROUND HABITAT

Keep the Underground Habitat clean and dry. Remember to watch the Habitat for signs that it may need to be cleaned. Writing yourself a little cleaning schedule reminder and leaving it in a place where you can always see it is a smart idea! When it is time for a cleaning, first gently recapture your bugs with your Turbo or Super Bug Vacuum and set them aside. Then simply hold the base with one hand and pull up on the clear front with the other until it comes free.

**CLEAN WITH WATER ONLY!! DO NOT USE ABRASIVE CLEANERS OR ANY HOUSEHOLD PRODUCTS!** Once the Habitat has been thoroughly rinsed out and put back together securely, remove the capture capsule from your Bug Vacuum and gently place your insects back in their clean home just the way you did that very first time.

Remember, if you follow the instructions for the insects, keep the Underground Habitat clean, and remember not to leave it outside, you will have tons of fun watching your insects in their new home!.

### CAUTION

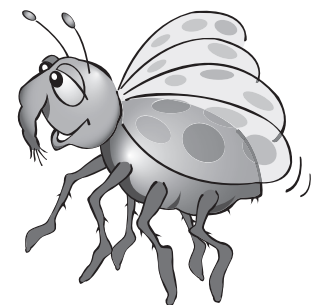

Do not leave your Underground Habitat outside or exposed to the elements.

**DO NOT** expose the Underground Habitat to heat of any kind. Doing so would turn the Habitat into an oven and kill the insects inside.

The Underground Habitat is intended for bugs and insects only.

Keep the Underground Habitat in a quiet and safe area away from household pets and small children who may become overly curious. It is important that the Habitat be placed some where it can not be bumped into or knocked over. That kind of sudden shock may harm or even kill the insects inside.

When cleaning the Underground Habitat, **USE ONLY WATER AND NEVER HOUSEHOLD PRODUCTS.** Even **WINDOW CLEANER** has chemicals that can be dangerous to your insects.

Lastly, remember you are using the Underground Habitat to explore and learn about living creatures in nature. It is your responsibility to keep the Habitat in a safe area and to make sure the insects have food and water. They are counting on you to take good care of them so please, don't take your new responsibilities lightly. Remember to always respect nature.

**WARNING:**

CHOKING HAZARD - Small parts  
Not for children under 3 years
